Subject: Public records act request re Kelun Zhang

Dear Kevin,

This is a request for records under the California Public Records Act.
I am requesting immediate access to all communications in any form between PAUSD staff and Kelun Zhang, the district's consultant for the high school counseling report.
Please let me know when and where I can inspect these records.

Best regards,
Ken Dauber

Subject: Re: Public Records Request

Hi Kevin,

I can limit my request to the following people, so long as you can make a good-faith effort to help me fill any gaps by considering the request below.

Kevin Skelly
Mike Milliken
Charles Young
Amy Drolette
Katya Villalobos
Tom Jacobowsky
Kim Diorio

Let me also explain to you my purpose in part, and you can tell me whether there is anyone missing whom I should be asking about. I'm interested in communications with Zhang around:

1. the scope of her work, including whether the schools should be compared
2. the writing of her report, including reviewing drafts and providing comments to her from staff
3. setting up the surveys themselves, including any issues of confidentiality, anonymity, etc.
4. making the data available to district staff during and after the survey

To be clear, that list isn't a list of topics that I'm asking about -- I want you to provide me with all communications with Zhang involving the people listed above, whether on these topics or not. I'm asking you to consider these topics and help me to know whether there are other records beyond these that are relevant, so that I can reduce the retrieval burden on you without missing records that I would want to see.

Thanks for your help,
Ken

Hi Ken:

You recently asked for all correspondences between the district and Kelun Zhang. Here is information from Liat Baranoff after doing some research on this. Would you mind limiting your request to specific people?

Thanks.

For this request, it is not feasible to search the entire PAUSD mail server for emails to or from Kelun Zhang. Our IT department said that it is just too many accounts and emails to query. If they could narrow the request down to specific people's accounts to check, then they can do it.
